

LED Tube Light Installation Instruction

Voltage input from one side

1. The principle of the installation for the LED tube light which connect the power supply from one side of the end cap, please see below,

2. This tube install to the conventional bracket, please see below,

Operation,

- 1) Cut off power first, take out the fluorescent tube light,
- 2) Remove the ballast / wiring cover,
- 3) Cut off the bracket's two power supply cords. As the position (1) of above picture, Cut off the four cords which are connected with the two ends, as the position (2)\(3) in the picture.
- 4) Connect one power supply cord into one pin in one end of the bracket, connect the other power supply cord to the other pin in the same end of the bracket. Please notice that there is current in the red part as the pictures after power on.
- 5) Use the electric rubberized fabric to bandaging well all the parts which were cut in the cord. This is to prevent short circuit and electronic shock.
- 6) Assemble the ballast / wiring cover, and power on.
