SolPol Solar Lighting and Retrofit System

**Made in
the USA**

New lighting or a smarter retrofit

Light new sites or upgrade existing poles with solar power. Reduce reliance on vulnerable underground wiring with complete lighting systems or retrofits for compatible fixtures.

Solar cylinder → controller and battery → LED light

- **Light new sites without underground power feeds** Choose complete solar lighting systems with poles, LED fixtures, solar generation, batteries and controls.
- **Break the cycle of wire theft and repairs** Autonomous solar reduces reliance on underground copper feeds. Retrofit suitable existing poles and compatible LED fixtures.
- **Cut grid electricity use** We size solar generation and battery storage for local sunlight, nightly lighting hours and overcast conditions.
- **Solar wrapped poles** are self-cleaning, have reduced wind damage potential, and gain solar power from sunrise to sunset every day of the year.

Start your new lighting or retrofit project

Each system is engineered to meet the lighting requirements and solar power generation for each project.

Send your location, lighting goals and pole count—plus photos for retrofits. Ask Eco-\$mart for a project review and a tailored system proposal.
